RPH Launches Pre-Engineered VAULT® Option to Expand Its Industry-Leading Penetration Portfolio

RPH, a leader in building envelope solutions specializing in roof and wall penetration protection, is proud to announce the launch of its new Pre-Engineered VAULT® option. This innovative offering was developed in direct response to customer demand for faster lead times and expanded size availability—without the need for full customization.

The Pre-Engineered VAULT® portfolio includes 28 new built-to-order sizes, alongside three existing Standard VAULT® options, bringing the total to 31 proven configurations. Based on RPH’s most frequently requested custom solutions, these ready-to-build designs streamline project planning and eliminate engineering fees, offering a cost-effective alternative with the same reliability and performance customers expect from RPH.

“For projects that don’t require a fully custom solution, our new Pre-Engineered VAULT® options strike the perfect balance—more size choices, faster lead times, and a simplified process,” said John Bradenham, General Manager of RPH. “We’re proud to bring specifiers and contractors an easier way to get the high-performance products they trust, with the speed and efficiency their timelines demand.”

Key Features of the Pre-Engineered VAULT® Line:

- Faster Lead Times compared to fully custom solutions
- No Engineering Fees for built-to-order, pre-designed units
- 31 Sizes Available, including 28 Pre-Engineered and 3 Standard
- Revit® Design Details available upon request
- Compatible with Multiple Curb Sizes and Applications

Each unit is engineered for performance and designed to meet the demanding requirements of commercial facilities including data centers, healthcare, education, critical infrastructure, and high-performance buildings.
